

ActivBinder™

Green Calcium Bentonite Clay

Bentonite clay has a drawing effect—the enterosorbent properties of calcium bentonite clay allows it to pass through the gut where it can bind to and absorb various substances, including toxins.¹ Acting as a selective enterosorbent, bentonite clay does not affect the serum concentrations of important vitamins and nutrient minerals in humans, while promoting healthy bowel motility.^{2,3} Bentonite clay has been shown to promote the diffusion of urea and uric acid from blood vessels to intestines, inhibit the absorption of urea and uric acid in the intestine, and assist healthy renal function.^{4,5}

Bentonite clay:

- ▶ Helps relieve temporary diarrhea and constipation*
- ▶ Supports healthy motility and gastronomical tone*
- ▶ Supports overall bowel health
- ▶ Promotes adsorption and elimination of toxins in the digestive tract*
- ▶ Aids in digestive cleansing*
- ▶ Contains trace minerals

Bentonite clay is named after Fort Benton, the city in Wyoming where the largest source of the clay can be found. Our bentonite clay is harvested from large volcanic deposits in the Mojave Desert.

Collinsonia Root

Native to North America, Collinsonia root is an herb historically used to support vascular tissue and water balance, including support of the bladder, kidneys, and digestive mucosal tissues. It is an alternative tonic to aid healthy renal function and gastrointestinal motility.

Ox Bile

Our ox bile extract powder has been prepared by a low-temperature dehydration process to preserve bile acids and active constituents.

Freeze-dried Desiccated Glands

Our freeze-dried glandular powders are manufactured from raw glands of 100% New Zealand cattle. Freeze drying is a process of removing water from the raw gland that ensures the finished dried product retains as much of the biological activity as possible.⁶
